

BORESAVER IKL PRO

BORESAVER IKL PRO

Cleaning treatment that dissolves calcium carbonate and manganese oxide deposits found in bores, wells, pumps and pipes.

DESCRIPTION

BoreSaver IKL Pro is an approved cleaning treatment that dissolves calcium carbonate or manganese oxide deposits found in bores, wells, pumps and pipes. The specially formulated combination chemical solution also offers an effective solution for water supply systems that suffer from both problems.

Use of IKL Pro improves water supply, increases output and extends the working life of pumping equipment and accessories. IKL Pro is safe and easy to use. It can be used without dismantling equipment and will not attack or deteriorate any materials inside the system.

APPLICATIONS

IKL Pro is supplied as a concentrated liquid and can be used undiluted or mixed with water just prior to use depending on the dosage required. It is a proprietary chemical blend of acids with a non-ionic surfactant that promotes emulsions.

IKL Pro is approved by the Secretary of State under Regulation 31 of the Water Supply (Water Quality) Regulations 2000 for use in potable water applications. Approved methods and dosages should be maintained at all times.

IKL Pro was developed in Australia by Aquabiotics Industrial.

MAIN CHARACTERISTICS

IKL Pro is added directly to the water system and the amount to use is based on the volume of water. Typical dosage rates are between 3-5% of the water volume in the well, depending on the severity of the contamination.

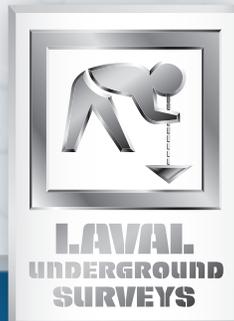

The IKL Pro treatment works directly on the problem, loosening and dissolving the deposits and related contamination. Any of the standard rehabilitation methods are then used, including surging and brushing, air-lifting and pump-in recycling, to safely pump the deposits and contamination away. The ideal cleaning time period can be between 4 and 24 hours. The frequency of follow up cleaning will be determined by the natural conditions in the system although regular maintenance is recommended.

To ensure the best possible results we have developed a Well Rehabilitation Analysis Checklist which should be completed before use. We recommend the use of a Laval

Underground Water Well Camera to accurately assess the nature and extent of the contamination.

IKL Pro is available in 5 gallon containers, 55 gallon drums and 275 gallon IBC.

IKL Pro can be used in conjunction with all other BoreSaver treatments. Refer to our technical department for inquiries.
